EXPLANATORY NOTES

Introduction

This publication contains statistics on industrial accidents and diseases which occurred during 1984-85. From 1 January 1983 the ABS introduced a re-developed system for the collection and processing of industrial accidents and diseases statistics for Victoria.

Scope

2. The statistics in this publication relate to workers covered by the Victorian *Workers Compensation Act 1958*. Self-employed persons and persons covered by the Commonwealth Government are excluded.

Coverage

3. The statistics have been compiled by the ABS from reports of workers compensation claims submitted to the Victorian Workers Compensation Board by insurance companies, self-insurers, and State Government departments. The legal basis for the submission of these reports is contained in section 74 of the *Workers Compensation Act 1958* and the *Workers Compensation (Amendment) Regulations 1982*. The compilation of statistics by the ABS is in respect of those claims only where:

- (a) a death has occurred;
- (b) time lost from work has amounted to one week or more;
- (c) injury or disease has caused a total or partial disability which is permanent, or expected to be permanent, irrespective of time lost; or
- (d) a previous claim has been re-opened.

Definitions

4. For the purposes of the collection the following definitions have been adopted:

Industrial accident. This refers to any work injury compensatable under the provisions of the *Workers Compensation Act 1958*, which causes the death of an employee, or permanent total disability, or permanent partial disability, or absence from work for one week or more. The term also includes compensatable accidents which occur when travelling to and from work (journey cases) and those which occur during a work break (recess cases).

An *industrial 'disease'* is distinguishable from an 'accident' by one or more of the following characteristics:

- (a) The slow and protracted nature of its cause;

- (b) Its ascribability to repeated or continuous action of a mechanical, physical, or chemical nature. It is not the effect of a single event but of a cause acting imperceptibly and constantly; and

- (c) The uncertain time of its beginning.

Fatal accident/disease. Cases where death results from a compensatable accident or disease.

Permanent total disability. Cases where the worker is considered to be totally and permanently incapacitated for the purposes of his/her employment.

Permanent partial disability. Refers to cases of partial or complete loss of, or loss of the use of, any part of the body faculty, as a result of which, although able to work, the earning capacity of the worker or his/her opportunities for employment are permanently affected.

Temporary disability. An injury or disease which does not result in death or a permanent disability.

Time lost. The period of time that the injured worker is unfit for work and for which compensation is paid or payable.

Cost of claims. Relates to compensation for wages and salaries, hospital and medical expenses, lump sum payments, common law, and legal payments. Where final details are not available insurers are asked to provide estimates. These estimates are included in the tables.

Unclosed claims. A claim which occurred during the financial year and had not been finalised at 30 June 1985. Payments made and time lost in respect of these claims are estimated by insurers. Unclosed claims are included in the statistics shown in the tables and represent approximately 60 per cent of all cases.

Re-opened claims. Cases previously closed in which the insurer accepts that further incapacity or additional medical treatment, etc. are directly attributed to the original accident. Such claims are not included in the data shown in the tables.

Classifications

5. For the purposes of this collection the following classifications have been adopted.

Industry and occupations. Industry is classified according to the Australian Standard Industrial Classification (ASIC), 1983 and occupation according to the Classification and Classified List of Occupations, Revised June 1981.

Type of accident/disease. The classification is based on the recommendations made by the International Labour Organization (I.L.O.). The 'type of accident' is defined by the I.L.O. as:

- (a) the manner of contact of the injured person with the object or substance; or
- (b) the exposure or the movement of the injured person which resulted in the injury.

Agency of accident/disease. The classification is based on the recommendations made by the I.L.O. The 'agency of accident' is the object, substance, or circumstance most closely associated with the injury and which, in general, could have been guarded against or corrected. A distinction should be made between the 'agency of injury' and 'agency of accident', e.g. a fire damp explosion may result in a miner being crushed by a falling beam. In this instance the 'agency of injury' is the beam but the 'agency of accident' is the material responsible for the explosion.

Nature of injury/disease. The classification is based on the Ninth Revision (1975) of the World Health Organization's *Manual of the International Statistical Classification of Diseases, Injuries and Causes of Death*, adjusted

where necessary to ensure classification to the principal original injury.

Bodily location of injury. The classification is broadly comparable to that recommended by the I.L.O.

Unpublished statistics

6. In some cases, the ABS can also make available information which is not published. This information may be made available in one or more of the following forms: photocopy; computer printout; manually-extracted tabulation. Generally, a charge is made for providing unpublished information. (Refer to Appendix A: Table of items collected in Victoria.)

Statistics on VIATEL

7. Selected social, economic, and population statistics are available on VIATEL *656#.

SUMMARY OF FINDINGS

In 1984-85, 46,137 original claims were received for compensatable cases compared with 44,473 in 1983-84, an increase of 3.7 per cent. Claims for females increased by 14 per cent in 1984-85 to 13,855 while for males there was an 0.1 per cent decrease to 32,282. Industrial Accidents accounted for 80.1 per cent of all claims in 1984-85, an increase of 0.6 per cent over the previous year.

A total of 282,222 weeks were lost as a result of all claims in 1984-85, an average of 6.1 weeks per claim as compared to 297,857 weeks lost and 6.7 weeks per claim in 1983-84. The cost of claims in 1984-85 was \$245m, an average of \$5,300 per claim which represents a significant decrease from 1983-84 when the cost was \$276m and \$6,200 per claim.

Industrial accidents

Of the 36,934 original claims received for industrial accidents, 27,215 (73.7 per cent) were for males and 9,719 (26.3 per cent) were for females. A total of 209,379 weeks were lost as a result of non-fatal accidents, an average of 5.7 weeks per accident. The cost of these claims was \$175m, an average of \$4,700 per claim. Fatal accidents cost \$1.7m, an average of \$60,000 per claim.

Industrial diseases

There were 5,215 original claims received for industrial diseases occurring during 1984-85, 2,959 (56.7 per cent) for males and 2,256 (43.3 per cent) for females. A total of 47,298 weeks were lost as a result of non-fatal industrial diseases, an average of 9.1 weeks per disease case. The cost of these claims was \$54m, an average of \$10,300 per disease claim. Fatal diseases cost \$1.7m, an average of \$41,300 per claim.

Severity of industrial accidents and diseases

In 1984-85 there were 36,423 (98.6 per cent) accidents that resulted in temporary disabilities while 466 (1.3 per cent) resulted in permanent partial disabilities. There were 14 accidents which resulted in permanent total disabilities and 31 fatal accidents. There was an 82.4 per cent increase in the number of fatal accidents and this was mainly in the construction and transport industries.

Also in 1984-85 there were significant decreases in the number of permanent total and partial disabilities because of industrial accidents with the decreases being mainly in the manufacturing industry.

There were 4,081 (78.3 per cent) disease claims that resulted in temporary disabilities while 1,058 (20.3 per cent) resulted in permanent disabilities. There were 34 diseases which resulted in permanent total disabilities and 42 fatal disease claims. There was a dramatic decrease of 43.5 per cent of fatal diseases in 1984-85 with the manufacturing industry accounting for the major part of the decrease.

Site of injury and time lost

The most common site of injuries was the trunk where 13,490 (36.5 per cent) were located. The next most common sites were the upper limbs and lower limbs where 13,149 (35.6 per cent) and 7,396 (20.0 per cent), respectively, of all work injuries occurred.

The time lost from work due to industrial accidents was less than two weeks in 42.2 per cent of claims and less than four weeks in 67.1 per cent of claims.

Occupation and industrial accidents

The tradesmen, production-process workers, and labourers occupation group accounted for the most accidents for both males and females, 18,236 (67.0 per cent) male accidents and 2,417 (24.9 per cent) female accidents. In the service, sport and recreation workers occupation group there were 2,449 industrial accidents involving females (25.2 per cent) compared with 2,694 industrial accidents involving males (9.9 per cent).

Nature of industrial accidents

The most common injuries sustained were sprains and strains which accounted for 21,833 injuries (59.1 per cent of all injuries). The next most prevalent injuries were open wounds which accounted for 5,203 injuries (14.1 per cent of all injuries).

INDUSTRIAL ACCIDENTS -
PERCENTAGE DISTRIBUTION BY NATURE OF INJURY AND SEX,
VICTORIA, 1984-85

The disease group with the greatest incidence for both males and females was that commonly known as repetitive strain injury (RSI), which comprises synovitis, tenosynovitis, and bursitis. There were 1,937 claims for this disease, 529 for males and 1,408 for females. This disease group accounted for 37.1 per cent of all disease claims, 17.9 per cent of all male disease claims, and 62.4 per cent of all female disease claims.

The second most common disease group was 'mental disorders' for which there were 895 claims and which accounted for 17.2 per cent of all disease cases. Of the 895 reports, 530 were for males and 365 were for females. The third most common disease group was 'noise-induced deafness' for which there were 850 reports or 16.3 per cent of all disease cases.

**INDUSTRIAL DISEASES -
PERCENTAGE DISTRIBUTION BY NATURE AND SEX
VICTORIA 1984-85**

Distribution of industrial accidents and disease by industry

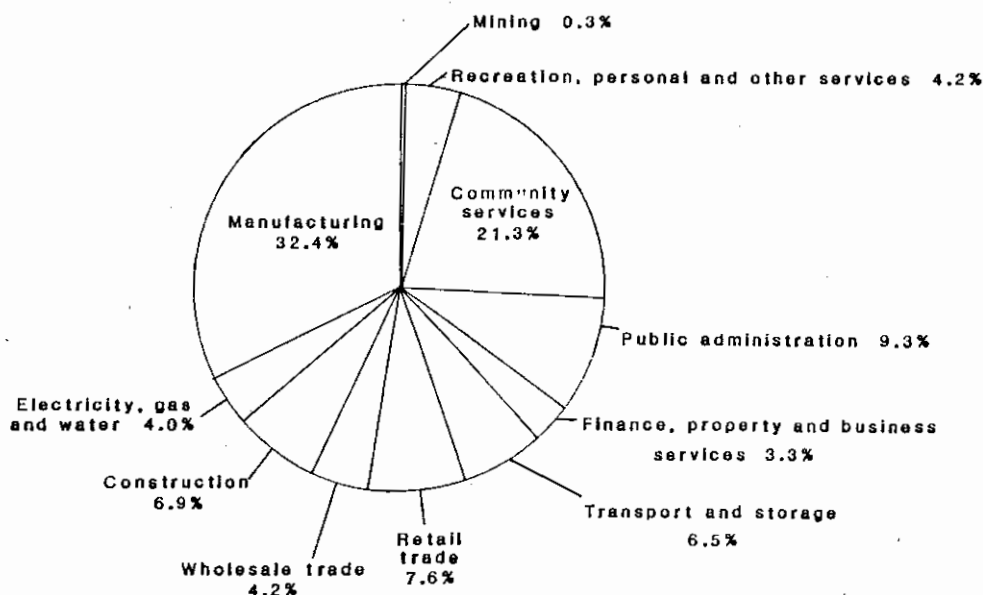

During 1984-85 the manufacturing industry, which employed 25.7 per cent of wage and salary earners (excluding persons employed in agriculture, forestry, fishing, and hunting) accounted for 33.0 per cent of industrial accidents and 28.2 per cent of industrial diseases. Community services accounted for 21.3 per cent of employed wage and salary earners, 20.3 per cent of industrial accidents and 28.1 per cent of industrial diseases.

DISTRIBUTION OF EMPLOYEES BY INDUSTRY(a), VICTORIA, 1984-85

(a) See footnotes (a) and (b) to Table 13.

DISTRIBUTION OF TOTAL ACCIDENTS AND DISEASES BY INDUSTRY(a), VICTORIA, 1984-85

(a) The agriculture, forestry, fishing and hunting industry group has been excluded to ensure comparability with the data contained in Table 13.

Rate of incidence

The industry with the highest rate of incidence of industrial accidents was community services with 641 cases per 10,000 employees. The construction industry was next highest with 472 cases per 10,000 employees. Within the manufacturing industry group the food, beverages and tobacco industries accounted for a rate of 598 cases per 10,000 employees. Finance, property and business services had the lowest accident rate with 68 cases per 10,000 employees.

(a) Employment figures for agriculture, forestry, fishing and hunting are unavailable, therefore all figures for this industry group have been excluded from this table. (b) Figures for employed wage and salary earners are derived by averaging the monthly statistics from the Survey of Employment and Earnings (SEE); Commonwealth employees are excluded. (c) The rate of incidence of accidents or diseases per 10,000 employees.

APPENDIX A: TABLE OF ITEMS COLLECTED IN VICTORIA

INDICATIVE OR REFERENCE DATA:

State
Recording period
Reference number
Name of insurers

CHARACTERISTICS OF CLAIMANTS:

Sex
Age
Occupation
Type of employment (full-time/part-time)
Industry, business or service
